ABSTRACT

Information on student enrollment, staff, and graduates in the public schools is summarized, drawing on information from the State Nonfiscal Survey of Public Elementary and Secondary Education, School Year 1993-94. In the 1993-94 school year, there were 43.4 million students enrolled in public elementary and secondary schools in the 50 states and the District of Columbia. Of these, 24.3 million were in prekindergarten through grade 6, with an additional 18.2 million in grades 7 through 12, and 0.8 million in ungraded classes. California had the largest student enrollment, and the District of Columbia the smallest. About 2.5 million teachers provide instruction for these students. The ratio of total teachers to total students for the nation was 17.4 students per teacher, but this should not be interpreted as average class size since not all teachers are assigned to a class. School staffs included about 451,000 teachers' aides, 33,000 instructional coordinators, 83,000 guidance counselors, and 51,000 school librarians. Some 2,233,000 students received regular high school diplomas during the 1992-93 school year, and an additional 53,000 received other types of diplomas. One figure and four tables present the data. How many students were enrolled in public elementary and secondary schools in 1993–94? How many staff members were paid to teach, supervise, and provide support services for education? How many students graduated from high school? The information to answer these and other questions is reported in the National Center for Education Statistics' State Nonfiscal Survey of Public Elementary and Secondary Education, School Year 1993–94.

How many students were enrolled in public elementary and secondary schools?

In school year 1993–94, there were 43.4 million students enrolled in public elementary and secondary schools in the 50 states and the District of Columbia (table 1). Of these students, 24.3 million were in prekindergarten through grade 6, an additional 18.2 million were in grades 7 through 12, and the remaining 0.8 million were ungraded students. (The five outlying areas are not included in national totals.)

California had the most public elementary and secondary school students (5,329,000), followed by Texas (3,608,000) and New York (2,734,000). The three lowest student counts were in the District of Columbia (81,000), Wyoming (101,000), and Vermont (103,000).

How many teachers were there?

About 2.5 million teachers provided instruction in public elementary and secondary schools in the 1993–94 school year (table 2). Among this group, 1,398,000 were elementary school teachers (including prekindergarten and kindergarten teachers) and 895,000 were secondary school teachers. The remaining 213,000 teachers taught ungraded students.

The ratio of total students to total teachers for the nation was 17.4 students per teacher. These ratios ranged from lows of 12.7 students per teacher in Vermont to a high of 24.7 in Utah. The median student per teacher ratio was 16.7, that is, half the states had a higher student-teacher ratio than 16.7, and half the states had a lower ratio. Student/teacher ratios should not be interpreted as average class size since not all teachers are assigned to a class (for example, music and reading teachers).

How many staff supervised or provided support services for public education?

In addition to the teachers described previously, about 451,000 teacher's aides directly assisted teachers in providing instruction (table 3). An additional 33,000 instructional coordinators and supervisors helped teachers through curriculum development and in-service training. Support staff for students included 83,000 guidance counselors and 51,000 librarians. This translates to about 524 students for every guidance counselor reported, and 861 students for each librarian. An additional 1,367,000 staff members provided support services for schools and students. This support included food, health, library, maintenance, transportation, security and other services in the nation's public schools. There were 121,000 school administrators (mostly school principals), 47,000 school district administrators, and about 146,000 administrative support staff.

The relative distribution of all staff is illustrated in figure 1. Instructional staff made up 62 percent of all staff. Another 27 percent of all staff provided support services to schools and students. Administrative staff made up 11 percent of all education staff. On the average, there were 15 teachers and 9 support staff for each administrator. All of these distributions and ratios vary greatly from state to state.

How many students graduated from high school during the 1992–93 school year?

Some 2,233,000 students received regular high school diplomas in the 50 states and the District of Columbia during the 1992–93 school year and subsequent summer (table 4). An additional 53,000 students received other types of diplomas, and 21,000 students received some high school completion certificate other than a diploma. Note that some states grant only regular diplomas and the high school equivalency certificates.

Technical Notes

The "State Nonfiscal Survey" is an annual state level collection of student, staff and graduate counts for grades prekindergarten through 12. The data are collected from state education agencies (SEAs), processed and edited by NCES, and then verified by each SEA. The "State Nonfiscal Survey" is part of the Common Core of Data collection.

All staff counts (including teachers) are in full-time equivalency units. This is the amount of time required to perform an assignment stated as a proportion of a full-time position, and computed by dividing the amount of time employed by the time normally required for a full-time position.

State agencies vary in their data collection and reporting systems, with resulting inconsistencies across states. Several states collapse two or more categories of staff into one. In these cases, NCES disaggregates this number by distributing the reported amount to the several categories based on the average ratios from other states. Other states omit counts of certain staff. In these cases, NCES imputes a number based on the average ratio of staff to students in the other states. Vermont now collects staff data every other year, except for data on teachers which it collects every other year. South Carolina collects support staff data every other year. NCES has imputed these data based on the staff-to-student ratios in 1992–93, their student counts from 1993–94, and a national average rate of change in staff ratios over the two years.

For further information

For additional information about this *Statistics in Brief* or the complete data set, contact Frank Johnson, National Center for Education Statistics, 555 New Jersey Avenue NW, Washington, DC 20208–5651; or call (202) 219–1618; or fax (202) 219–1728; or electronic mail to Internet address "fjohnson@nces.ed.gov".

a/ Values for prekindergarten students were imputed based on current year data.
b/ Prekindergarten teacher counts were imputed based on current year data.
c/ Wyoming and Virgin Islands do not have prekindergarten programs.
--- Data missing or not available. These counts are included in other teacher categories.
NOTE: Teacher counts are full-time equivalency (FTE) counts. Elementary and secondary teacher counts are not directly comparable across states due to differences in the grades included in these designations.
